We Value Strong Voices, Safe Choices

In May, safety was at the forefront of discussions in the construction industry. Our team of safety professionals were actively leading our crews' training, from OSHA's Safety Stand Down on Fall Protection to Mental Health Awareness and Suicide Prevention to Electrical Safety.

During Construction Safety Week, we emphasized the theme of "Strong Voices, Safe Choices." This theme represents the values and beliefs we share with every team member and aim to instill in them. Throughout Construction Safety Week, which takes place in early May, we participated in education, training, and discussions to reinforce our commitment to safety.

John Gooden, President & COO

Empowering our team members to speak up for safety and make safe choices is crucial. We encourage our team members to use their strong voices to alert others to unsafe situations and support each other in making safe choices. Team members can stop the task and get their supervisor involved to find resolution, without fearing repercussion. Communication between team members is vital to minimize harm, and we prioritize this in our Weekly Toolbox Talks at every job site. Our team members know that they are empowered to look out for one another, and we value their safety above all else.

As members of Associated Builders and Contractors, we utilize the STEP Safety Management System, which provides a framework to measure, strengthen, and build our safety programs. We strive to be a top-performing ABC STEP member every year and utilize the STEP Safety components to expand our safety practices. This year, ABC added total human health as a key component to the STEP Safety program, which incorporates a whole-person approach, including psychological safety that is respectful and inclusive. Our team is our greatest asset, and we prioritize their safety. I am very pleased to announce our 2023 STEP Safety Diamond Level Award was received on May 11th at the Annual Associated Builders and Contractors Association Delaware Chapter awards dinner. ■

ASME Expertise Turned Sterilizer Stress into Success

Mike Lombardi (Leadman), Heath Kroll, (ASME Code Manager), Mike Corrin (QC Inspector/CWI)

We are excited to share with you a recent project we completed for Steris, where we successfully repaired a sterilizer on site using our ASME Code repair services. Steris initially had difficulty finding the right contractor for the repair, but our ASME professionals conducted an on-site inspection, we were able to determine that the equipment could be repaired without the need for lifting or moving the sterilizer.

Our ASME certified welders, Mike Lombardi and Mike Corrin (pictured above) were the perfect fit for the job, and we quickly got to work fabricating a new piece for the sterilizer. The project had to be completed over a holiday break, and the environment required the use of stainless steel. The welding was done to R-Stamp certification and procedure to ensure the highest quality of work, and we made sure to adhere to all ASME welding certification requirements.

At M. Davis, we take quality seriously, and this project was no exception. We conducted a thorough walk-through to ensure that the repair was done to the highest standards, and we were able to complete the entire repair within just three days. This fast response time demonstrates our commitment to meeting our customers' needs and exceeding their expectations.

We understand that repairs can be challenging and time-consuming, which is why we provide efficient and effective solutions. ■

**Meet our M. Davis & Sons
ASME Team Members here**

ASME Code work for over 30 years

We Hold 3 Stamps:

ASME 'S' Stamp for Boiler parts

ASME 'U' Stamp for Pressure Vessels

National Board 'R' Stamp for Repairs to
Pressure Retaining Components

Over 100 ASME-
certified Welders

Over 50 visual
and liquid
penetrant
examiners

12 Certified
Welding
Inspectors

We Build it! Low Voltage Electrical Power Distribution Products

Portable Power Distribution Center

Product FAQs

- Moves with ease by portable crane or lift truck
- We deliver – no long wait times!
- Unit comes fully built and ready to for use when it arrives at your job site
- Fully customizable
- UL or cUL labeled
- We build in house, in the USA, ship to your location.
- Reusable, no disassembly required.

In The Community: Where are we serving?

In April, the Food Bank of Delaware graduated 13 students through their L.O.G.I.C. program. L.O.G.I.C. stands for Logistics, Operations, General Warehousing and Inventory Control. This 14-week program provides students with training on the ins and outs of warehousing and more. John Gooden, President and COO of M. Davis & Sons, provided the keynote remarks to the class. We are so glad to support the Food Bank of Delaware with their mission and look forward to their next program session! ■

In early May we participated in the New Castle County Vocational-Technical School District "Signing Day" event! 200 graduating seniors graced the stage at Delcastle Technical High School to sign the letter of intent to join industries from all over the state of Delaware. M. Davis & Sons has been a longtime supporter of vocational education and we are happy to report we signed more than 15 new employees. The event was attended by Senator Chris Coons who reinforced the message to students that Apprenticeships and Vocational programs are critical. ■

Students at Weld Competition

NOCTI (National Occupational Competency Testing Institute), held a Weld Competition for high school students at Octorara Area High School in April. This event featured students from local area high schools a chance to compete for top scores in Welding. Judging the event were two of M. Davis's finest, Jim Cassidy, Pipe Fabrication Shop Superintendents, and Mike Corrin, ASME Code Welder. ■

Jim Cassidy (Shop Superintendent) and Mike Corrin (Code Weld Inspector)

Testimonial

“M. Davis was recommended because of their professionalism, attention to detail and integrity. My staff and I can say without question, they have surpassed all those adjectives. We are lucky to have them as a partner and look forward to our ongoing relationship.” ■

- Richard Aulenbach, III (RPA Engineering)

ISPE DVC Symposium - Philadelphia, PA

May 16th, 2023, was the date of the ISPE Delaware Valley Chapter Symposium & Exhibition held at Lincoln Financial Field in Philly. This event is held annually and includes a Career Fair and Educational Sessions. M. Davis & Sons was pleased to again be a sponsor and support the pharmaceutical industry professionals in our local area. ■
